# Sea Adventure

## A PHENOMENAL SUCCESS

The adventurous and dynamic AQUATEAM took Italian audiences by storm with its **24' DEBUT TV SPECIAL** featuring the rescue of a pod of sperm whales from the threat of a treacherous plastic slick.

Premiering in prime time on the Italian RAI Kids' channel **RAI YOYO** on March 22, 2021 (World Water Day), AQUATEAM was welcomed with a **TOP SCORE OF 300,000 VIEWERS**.

Since then, these numbers have increased thanks to the frequent broadcaster's reruns and Rai's offer on web streaming platform RaiPlay - not to mention the prestigious **NOMINATIONS AND AWARDS** garnered at International Festivals and Industry's major events.

## FROM ANIMATION TO ACTION

The AQUATEAM franchise proved to be a wonderful way to charm, amaze and foster kids' ecological awareness. Otty the Octopus has been adopted as the official mascotte of the **Cala Gonone Aquarium** in Sardinia Island.

With RAI's support and with the official endorsement of the Italian Ministry of Ecological Transition, AQUATEAM has gone **FROM ANIMATION TO ACTION**, originating a series of **kids labs** touring Italian locations and beaches on summer 2021 and 2022.

The AQUATEAM franchise enjoys the support of The Sardinia Film Commission Foundation.

## THE NEW EPISODES

The H2O Team formed by the champion of the environment Marysun and her inseparable sidekick, Otty the octopus, are ready to sail back in action with **4 new episodes**.

In each TV Special Marysun and Otty set sail on their super-ecological "Catamarin", from their base on the coast of Sardinia, to the **Arctic Sea**, the **Pacific**, up to the **Mediterranean** Sea... The mission of exploring and defending the marine environment and its wonderful creatures will be shared with Desy, a little girl fond of the "Blue Planet".

The 4 new 24' **TV Specials** (also available in the 90' **TV Movie** cut) will see our heroes dealing with **narwhals**, **sea turtles**, the Galapagos Islands **sharks** and the mysterious **monk seals**.

**Producers:** GraFFiti Creative & TOONZ Media Group

**Main Broadcaster:** RAI Yoyo

**Première:** Summer 2023

**Sales rights:** Worldwide (excluding Italy)

# THE 4 NEW AQUATEAM SPECIALS

## 1 Chills In The Arctic

While the H2O Team is preparing to set sail for a cruise around the world, a request for help arrives from the Arctic Sea. The local narwhals are in peril because of the ice cap melting. It's up to the AquaTeam to investigate and save the cetaceans from a labyrinth of ice floes with the help of a very young Inuit shaman!

## 3 Going Galapagos

During a mission in the Galapagos to help young Desy study the local shark population for her science research, the AquaTeam decides to use a device created by the brilliant Matt to discover what the archipelago was like in the 1800s. But when the system goes haywire, our heroes come face to face with young Darwin himself!

## 2 Turtle Trouble

A newborn sea turtle born on a Florida beach and a baby manatee join forces to find the way back to the legendary current of the Sargasso Sea, where all the sea turtles gather. The H2O Team will have to track and escort this "strange couple" to ensure that their marine friends reach their destination safe and sound!

## 4 On the Sirens' Trail

Mystery in the Mediterranean Sea: some photos taken by a friend of Desy seem to reveal... a mermaid! While the AquaTeam Catamarin sets sail towards the Strait of Messina, the expert Marysun wonders: is the mermaid actually the "mythical" monk seal, considered extinct and ready to repopulate the area?

# CHILLS IN THE ARCTIC

It's April. At the base of the AquaTeam everything seems ready for the Team's next cruise around the world. Preparations are in full swing, the international press follows the start of the journey, and a small crowd is there to greet the AquaTeam... but first, our heroes are set to go North. From the coastal village of Kulusuk, in Norway, a request for help has arrived from John and Gala, two researchers who left for the Arctic to study the problem of the melting of the polar caps and set up a narwhal haven. The "sea unicorns" are acting strangely and the Team's intervention to understand what's behind their odd behaviour is sorely needed!

Arriving on the spot after escaping the danger of fog banks, our heroes discover what's triggering the odd behavior of the Kulusuk cetaceans: the climate change and the noise pollution of the old fishing boat of the grumpy sea wolf Bjorn. The mystery seems solved but inadvertently frightened by the siren of Bjorn's old jalopy, the narwhals flee towards the decaying polar quay nearby.

With the help of octopus dumbo Jezza, Otty's distant relative, and thanks to the precious assistance of a very young Inuit shaman who seems in perfect harmony with all creatures of the Arctic, the members of the H20Team are able to reach the narwhals, surrounded by every part of the ice floes that seem to crush them.

To get the cetaceans out of the trap it will take all the courage and resourcefulness of the H20Team...
